### **HINTS TO EXHIBITORS:**

Exhibits are judged on the following basis: size, 25%; stem and foliage, 10%; color, 25%; quality of material, 40%.

**Cutting and hardening of plant material.** If plant material is to hold up through the exhibition period, it must be cut no later than the day before it is to be exhibited. Cutting should be done about 4 pm, since at that time there is the greatest amount of sugar in the leaves, and as soon as the flowers are plunged in water, they take up enough to overcome any apparent temporary wilting. Plunging stems in water at 110 degrees F, is usually best, then set in a cool room, out of any draft and let the water cool to room temperature. This enables the flowers to regain their turgidity and last much longer.

Cut stems cleanly at an angle with a sharp knife and place at once in deep water. Flowers should be kept in deep water 8-12 hours or overnight. All foliage that is below the waterline should be removed. Foliage to be used in arrangements, such as hosta, vegetable leaves, canna, peony, etc., should be immersed in water overnight. Foliage should be clean; any broken, diseased or disfigured foliage or petals removed.

Flowers or branches with wood stems, such as Phlox, Stocks, Chrysanthemums, should be split, crushed or pounded before being placed in deep water. Dahlias should be picked at daybreak with long stem, placed first in cold water and then in hot water and placed in a dark, cool place during the day.

An exhibitor should pay close attention to grooming all exhibits by removing all dirt, spray residue, dead leaves and blooms.

A few definitions to help exhibitors are:

**Bloom** .....individual flower, a solitary flower on one stem

**Spray** .....portions of plants with a number of flowers on one stem

**Spike** .....a flower structure with flowers stemless on a common lengthy stalk
